

dropna() with subset

```
df.dropna(axis=0, subset=['gender'])
```

but only look at gender

drop
rows

	age	height	gender
0	12.0	1.72	M
1	NaN	NaN	F
2	14.0	1.91	NaN
3	16.0	1.54	M

DF.DROPNA()

removes columns or rows with missing values

SUBSET

restricts or localizes the method application to specific orthogonal labels
