MORE WAYS TO DATAFRAME

- **dict of tuples**

  like dict of lists, but with tuples

  column-wise

- **dict of dicts**

  key:value pairs with column names as keys and index-labeled key:value pairs containing values

  column-wise

- **dict of series**

  a continuation of key concept #2

  column-wise

- **list of dicts**

  list of key:value pairs containing colum labels and values

  row-wise
